

Leveraging EDISON and it's new AI modules within PRAGMA

- Near term goals for PRAGMA 38:
 - Provide access to EDISON @ KISTI for a few HKU researchers so they can get experience working with it and possibly demo their use case at PRAGMA 38
 - Deploy EDISON instance to PRAGMA Cloud for use in PRAGMA 38 demo and beyond
 - Deploy Kubernetes on PRAGMA Cloud to explore integration with EDISON (currently uses Docker Swarm)
- Longer Term: Integration with ABCI/Taiwania2/AI Platform?
