

# DTN and Data Movement Focus Group

Ryousei Takano, Yusuke Tanimura (AIST), Kazutoshi Fujikawa (NAIST),  
Jim Chen (NWU/Starlight), Susumu Date (Osaka U), Jeremy Musser,  
Yu Luo (Indiana U), Nadya Williams (UCI), Igor Sfiligoi (UCSD)

PRAGMA Workshop 37, San Diego

# Updates from PRAGMA36

- Goal: We explore solutions to transfer big data (securely) among PRAGMA Clouds and share best practices.
- Possible solutions:
  - DTN (Data Transfer Node): e.g., FIONA@PRP
  - AWS S3-based cloud storage: e.g., Ceph, Sality
- Progress:
  - Set up DTN nodes on UCSD and AIST
  - Transfer zebrafish brain image data: avg. 6.4Gbps

# Discussion on PRAGMA37

- Look back on UCSD-ABCI experiment
- What is the definition of DTN?
- Jim Chen gave us his GRP workshop talk “Starlight DTN-as-a-Service, A GRP Service Prototype”
- Software stack of DTN
  - File transfer: BigData Express, nuttcp
  - Monitoring: perfSONAR
  - DTN-as-a-Service@Starlight
- OSG data federation (CDN)

# What's next toward PRAGMA38

- Expand DTN experiment
  - AIST, UCSD + **Starlight**, Osaka U, (Indiana U, Indonesia U?)
  - Collaboration with **PRAGMA-ENT**
- Other approaches: object storage, distributed cache
  - Collaboration with **AI focus group**

# Disk-to-Disk data transfer experiment from UCSD to ABCI

- Total data size: 574GB
- File size: 193MB
- Number of files: 2977
- Elapsed time: 12m10s

- Tool: FDT version 0.26.1

\*) Zebrafish brain image raw data

# Disk I/O perf. on UCSD and ABCI

	UCSD DTN	ABCI@AIST DTN
CPU	Xeon E5-1620 v3 @ 3.50GHz	Xeon E5-2640 v4 @ 2.40GHz x2
Memory	32GB	256GB
NIC	Myri-10G x2	InfiniBand EDR x2
OS	CentOS 7.4.1708	RHEL 7.4
Storage	ZFS	Spectrum Scale (GPFS)

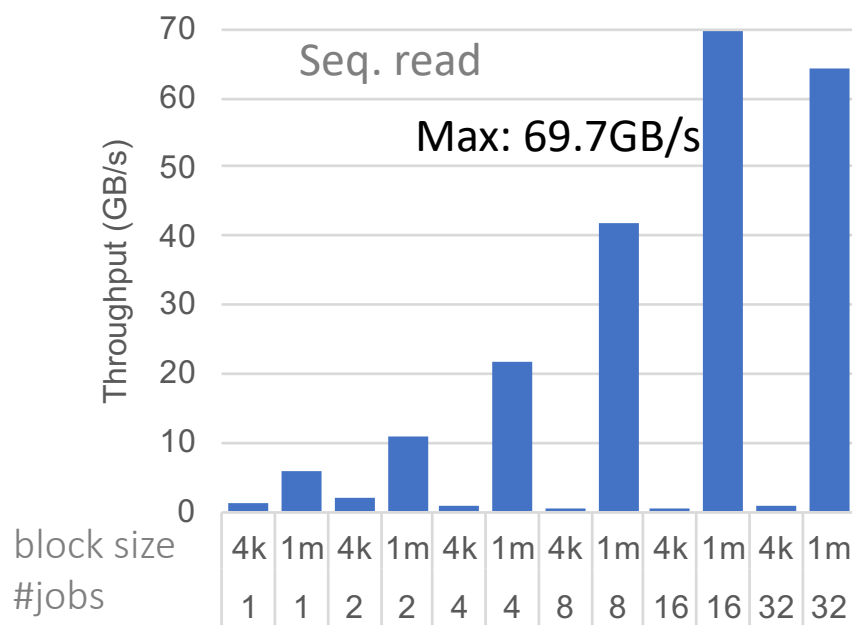

fio benchmark version 3.15 (w/o directIO)

# Disk I/O perf. on UCSD and ABCI

	UCSD DTN	ABCI@AIST DTN
CPU	Xeon E5-1620 v3 @ 3.50GHz	Xeon E5-2640 v4 @ 2.40GHz x2
Memory	32GB	256GB
