# Show Me the World (SMW) :
An Intelligent Cloud of Things System for Sight-Disabled People

Eunsol Lee, Zheng Lan, Li Taijin, HanKyul Kim, Karpjoo Jeong
Konkuk University Smart Infrastructure Lab

- For their living and safety, sight-disabled people also need to know or understand their surroundings in the world.

- We develop an intelligent cloud of things system to provide information about their surroundings.

- SMW uses IoT sensing devices to obtain information about the user's surroundings. SMW also employs a wearable gateway to manage those devices.

- SMW supports cloud-based image analysis tools to recognize other people approaching the user and to detect the existence of objects and spaces.
